

## How to Make Navigating Your Computer a Little Easier by Renaming Drives - XP

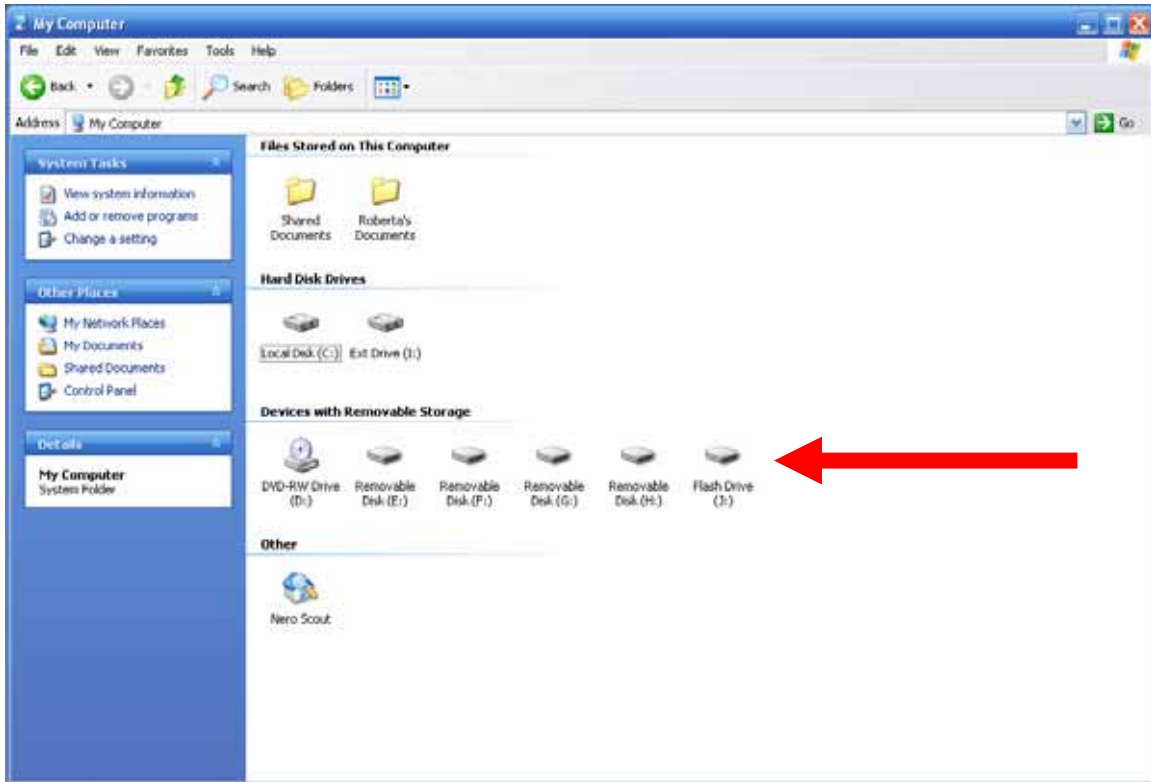

For example, to rename your flash drive:

- Insert flash drive in USB port.
- Flash drive window will open. Pay attention to the title bar of the flash drive window it will tell you what the current name of the flash drive is and where your flash drive is located. Look below. My flash drive is named flash drive and is located at drive (J:).

- Close window.
- Double click on My Computer
- Right click on the icon where your flash drive is located. Look at next screen and you will see my flash drive locate at (J:). See sample window below.

## How to Make Navigating Your Computer a Little Easier by Renaming Drives - continued
